PROJECT DETAILS

Digital Image Processing: This one is my academic project. Digital Image processing is to adjust the spatial resolution of the everyday images captured by the camera. It is used to enhance the image or perform some specific operation on it like gray to color, increase contrast, resize and histogram of the image etc. In this project we work on different-different technique to analysis the image.

- I have used **Python Language** in this project.
- **OpenCV** is a module of **Python language** that mainly focus on processing the image.

E-commerce and Blogging: E-commerce is a website that allows you to buy and sell tangible goods, digital products or services online. Integrating your business into the online retail industry as it continues to accelerate and change requires strong E-Commerce and Blogging. Simply, the design of your site influences the success of your business.

- I have used **Python Language** in this project.
- The system is built fully in **Django** Framework in backend and HTML, CSS in front-end.

Billing System: Billing system is an most powerful tool in today's business environment. That allows you to track the products and services your customers use, generate and send invoices with, and receive payments. Generate smart, and professional-looking bills and invoices with your business style, irrespective of your process, generating accurate invoices for better business management.

- I have used **Python Language** in this project.
- **Tkinter** is a module of **Python language** that mainly focus on Desktop Applications.

Splitting File Application: The Splitting File Application is designed and it used to separate the files with the basis of their extension like .txt, .mp4, .jpg and .pdf etc and dump them into their suitable folder.

- I have used **Python Language** in this project.
- **Os.path** module is submodule of **OS** module in python used for common pathname manipulation.
