PROJECTS

Project in Graduation:

Project Title 1: Design and Analysis of Multilayer High Pressure Vessels.

Summary- The pressure vessels are used to store fluids under pressure. Pressure vessels find wide applications in thermal and nuclear power plants, process and chemical industries, in space and ocean depths, and in water, steam, gas and air supply system in industries

Project Title 2: The Overview of Kothagudem Thermal Power Station.

Summary- In thermal power stations, mechanical power is produced by a heat engine that transforms thermal energy, often from combustion of a fuel, into rotational energy. Most thermal power stations produce steam, so they are sometimes called steam power stations. Not all thermal energy can be transformed into mechanical power, according to the second law of thermodynamics; therefore, there is always heat lost to the environment.
