## Projects

- Solar power bank with wireless charging.

Lead a team to construct the smart solar power bank integrates lithium battery pack with solar panels battery protection and wireless charging coils using dc power boosters and charge controllers to provide for a feature packed power bank.

- Refrigeration using waste heat from an engine.

In this project we have to carry out an experimental investigation of an Electrolux Refrigeration System using waste heat of an engine. This would provide an alternative to the conventional vapour compression refrigeration system used generally. While considering the power utilisation of refrigerators in vehicles, an effort has been made to drive the refrigerator with the use of heat energy which will be economical without use of any electrical power.

## Training courses

- Summer Internship at Electronic service and training centre, Ramnagar, Uttarakhand .
- 6 week online Training on AutoCAD at Internshala.
