Project: E-Commerce Web Application

E-Commerce Web Application. The product will provide platform for several individuals and companies to sell their products. The application is intended to be small and resource efficient. Application will implement all of the CRUD operations on database with strict constrictions to DRY principle. The goal of our application is to provide a quick and easy to use interfaces for all users.

Tech Stack: Java 8, Collections, CRUD, JPA, Hibernate, Spring, Spring Boot, Git, Spring Rest, Postman, JSON, Mysql, HTML, CSS, JavaScript, Typescript, Bootstrap, Angular

Project: Airline Reservation

The system is standalone in nature. It is designed to provide functionalities like booking of tickets in which a user should be able to apply for tickets of any flight and of any class. A limitation is imposed when the number of tickets for which user apply is greater than available seats or no seats are available. If seats are not available, then put user transaction in the waiting queue. If the tickets are available, then it is issued to the user and it must be updated in the database concurrently.
