### **Projects –**

#### **1. Fitness App on Android**

The App was designed to offer a wide variety of fitness exercises supported by text instructions and interactive images. It also had a calorie counter to track what will you be consuming whole day differing from person to person according to their respective BMI (Body Mass Index).

**Tools and Technologies Used:** Android SDK tools, Android Studio IDE, Emulator, Java SE JDK, SQLite Database.

#### **2. EduTour Web Application**

The “EduTour” was developed to form a whole management system which included universities, courses, fees, and location etc. The “EduTour” system provided information to those users who have some issues and wanted the best course for it. It helps user in every aspect of searching the course, based on the preferred location. This project is a web-based software that will help in storing, updating and retrieving the information about users through various user-friendly menu-driven-modules.

**Tools and Technologies Used:** HTML, CSS, JavaScript, Node.js, Angular.js, MongoDB, Visual Studio Code.

---
