PROJECTS

Restaurant Management System

"Online Restaurant Management System" is a web application. This system is developed to automate day to day activity of a restaurant. A restaurant is a kind of business that serves people all over the world with ready-made food. This system is developed to provide service facilities to the restaurant and also to the customer. This restaurant management system can be used by employees in a restaurant to handle the clients, their orders and can help them easily find free tables or place orders.

Roles &Responsibilities :-

Participated in required gathering and analysis

Involved in various modules development

Involved in database conectivity

Technology :-

Java, J2ee, JDBC, MySql, HTML, CSS, BootStrap, Javascript

Employee Management System

Employees Management Software makes it easy for the employer to keep track of all records. This software allows the administrator to edit employees, add new employees, transfer/promote/terminate employees. Each employee in the database is associated with a position can be added and edited when need arises. Employees can be transferred between positions easily without having to retype back their information in the database. You can check to see if there are duplicate positions/employees in the database. Most of all, the employer can assign tasks to employees and assess their progress in order to keep track of employee performance
